Handling Precautions

* Turn off the power and unplug the power cord if the flash will not be used for a few days.
* For peak performance and longer life, the unit should be fired several times every month.
* Do not use the unit if it has been in contact with moisture or flammable vapour and / or flammable material.
* Do not use the flash if it appears to be damaged.
* Never attempt to service the unit yourself. Severe shock and / or burns could result.
* Only certified technicians are authorized to service this unit.
* Before plugging in the unit, check that all the switches are in the "OFF" position.

Test fire button

Using the OPL-M40

The OPL-M40 can be screwed into any standard AC light socket. It can also be used with the Opus OPL-SA02 light socket (see Available Accessories).

There are several ways to trigger the Opus OPL-M40 monolight

Sync Socket:
The sync socket is a standard ⅛" jack and is used for connecting the OPL-M40 to a camera with the sync cord. Please refer to your camera's instruction manual for sync cord operation.

Photocell:
The OPL-M40 has a built-in photocell, enabling the unit to be triggered by another flash source.

Flash Test Fire Button:
The flash test fire button manually triggers the flash without using a camera. This is useful for testing the flash and checking exposures.
